PROFESSIONAL SUMMARY

Microsoft Power Platform Developer and Consultant with hands-on experience designing and delivering enterprise low-code solutions across procurement, operations, finance, asset management and document automation. Builds Canvas and Model-Driven Power Apps backed by Microsoft Dataverse, orchestrates approval and integration workflows with Power Automate, and extends model-driven experiences using JavaScript and Power Fx. Current delivery includes an end-to-end Procure-to-Pay platform with 50+ Dataverse tables, multi-stage Business Process Flows, vendor onboarding, SharePoint document management, Power BI reporting, and AI-assisted invoice data extraction. Microsoft Certified Fabric Analytics Engineer Associate with experience across requirements, solution design, testing, UAT, deployment and support.

POWER PLATFORM ENGINEERING STACK

Application Development	Power Apps - Model-Driven Apps, Canvas Apps; Power Fx; forms, views, business rules and Business Process Flows
Automation & AI	Power Automate Cloud Flows; approvals, notifications, data synchronization and AI-assisted invoice/document data extraction
Data & Security	Microsoft Dataverse; relational data modeling, tables, columns, lookups, relationships and security roles
Extensibility	JavaScript form scripting and command/ribbon customizations; HTML5, CSS3; REST API fundamentals
Microsoft Ecosystem	Power Pages, Power BI, SharePoint Online, Microsoft 365, Teams integration, Microsoft Copilot / Copilot Studio exposure
Engineering Practices	Requirement analysis, solution design, SDLC, Agile delivery, UAT, deployment/support, Git and GitHub

PROFESSIONAL EXPERIENCE

Consultant | HOSHŌ DIGITAL

Mar 2026 - Present

Indore, Madhya Pradesh

- Design and develop enterprise Canvas and Model-Driven applications that digitize business processes across procurement, operations, finance and vendor management.
- Engineer Dataverse data models with relational tables, lookups, business rules and security configuration to support scalable, role-aware applications.
- Build Power Automate cloud flows for approvals, notifications, record orchestration, data synchronization and document-centric automation.
- Implement AI-assisted invoice processing to extract structured data from invoices and route captured information into downstream application workflows, reducing manual transcription.
- Extend Model-Driven Apps with JavaScript form logic, command/ribbon customizations and Power Fx to automate field behavior, navigation, validations and user interactions.
- Configure multi-stage Business Process Flows that guide users through controlled enterprise processes and align application behavior with operational stages.
- Integrate Power Platform solutions with SharePoint Online, Microsoft 365 and Power BI for document management, collaboration and operational reporting.
- Work with stakeholders through requirement discovery, solution reviews, testing, UAT, deployment and issue resolution within structured Agile/SDLC delivery.

Jr. Consultant - Intern | HOSHŌ DIGITAL

Dec 2025 - Mar 2026

Remote

- Built and customized Power Apps for task tracking and asset-management scenarios, translating functional requirements into usable low-code interfaces.

- Created Power Automate workflows for notifications, approvals and data synchronization, and supported RPA-based automation use cases.
- Modeled relational data in Dataverse, configured security roles and contributed to Power BI dashboards for operational reporting.
- Worked within enterprise Microsoft 365 and Agile delivery environments, supporting development, testing and iterative solution improvement.

SELECTED ENTERPRISE PROJECTS

Enterprise Procure-to-Pay (P2P) Management Platform

Power Apps (Model-Driven & Canvas) | Dataverse | Power Automate | Power Pages | JavaScript | SharePoint | Power BI | AI Document Processing

- Contribute to the design and development of an end-to-end P2P platform spanning Demand Request, Purchase Requisition, RFQ/Vendor Quotation, Blanket Purchase Order, Purchase Order, Logistics, ASN, GRN, Invoice, Payment and Vendor Onboarding.
- Designed and worked across a Dataverse solution containing 50+ tables supporting procurement, logistics, inventory, finance, vendor management and sales-related processes.
- Implemented a cross-table Business Process Flow covering Raise Requisition -> Quotation -> Quotation Review -> Purchase Order -> Logistics -> Process Invoice, with JavaScript-driven stage behavior for procurement scenarios.
- Developed JavaScript customizations for form events, field mapping, lookup handling, validation, BPF navigation and command/ribbon actions in Model-Driven Apps.
- Built Power Automate workflows for approvals and operational automation, including AI-assisted invoice extraction that captures invoice data for downstream processing.
- Supported vendor-facing onboarding through Power Pages and document-centric processes through SharePoint integration; contributed to ERP/Business Central integration planning.
- Translated procurement requirements into Dataverse schema, application modules and workflow logic while supporting solution testing, UAT and iterative client feedback.

Asset Flow Next - Task & Asset Management System

Power Apps | Power Automate | Dataverse | Power BI | Microsoft Copilot

- Developed a low-code task and asset management solution using Power Apps and Dataverse to centralize task tracking and asset allocation.
- Designed the relational data model and automated notifications/approval routing with Power Automate.
- Integrated Power BI for KPI visibility and incorporated Microsoft Copilot capabilities for natural-language interaction with business information.

TECHNICAL SKILLS

Power Platform: Power Apps (Canvas & Model-Driven), Power Automate (Cloud; Desktop/RPA exposure), Power Pages, Dataverse, Power BI, Power Fx

Customization: JavaScript, HTML5, CSS3, Model-Driven forms/views, Business Rules, Business Process Flows, command/ribbon customizations

Data & Integration: Dataverse, MySQL, relational modeling, ER diagrams, SharePoint Online, REST APIs, Microsoft 365 integration

AI & Analytics: AI-assisted invoice/document extraction, Microsoft Copilot, Copilot Studio exposure, Power BI, Microsoft Fabric

Programming & Tools: C, C++, JavaScript, VS Code, Git, GitHub, MySQL Workbench

Delivery: Requirements gathering, Agile, SDLC, testing, UAT, deployment support, troubleshooting and documentation

CERTIFICATIONS

Microsoft Certified: Fabric Analytics Engineer Associate | Earned Jun 2026 - Expires Jun 2027

Introduction to Model Context Protocol | Anthropic Academy | Apr 2026

EDUCATION

Bachelor of Technology - Computer Science

2021 - 2025

Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV) - Bhopal, Madhya Pradesh
